

## Challenge Identification

To digitalize and automate the inspection of secondary infrastructure to ensure the health of the referred assets

<b>Area</b>	Infrastructure and Services
<b>Problem Description</b>	Secondary infrastructure (channels, supports, trays, structures) depends on human inspections that are intermittent and poorly traceable. Therefore, the aim is to enable digital inspections, permanent sensors and automatic deterioration analysis.

 **Expected Results**

**To improve infrastructure inspection in time and safety (a daily inspection takes 3 to 5 hours on average)**

 **Scope**

To change the strategy
