

Challenge Identification

Optimization of fleet washing with automated and resource-efficient processes

Area	Cross-Cutting
Problem Description	<p>On site, pickup truck travel is a constant risk. To maintain proper visibility conditions and eliminate risks, it is necessary to implement a pickup truck washing system that adapts to a concession with limited scheduling and coverage, as it leaves part of the light fleet out. The lack of timely cleaning of windows and components reduces visibility and increases the risk of incidents, in addition to generating inefficiencies due to travel and waiting times. An innovative solution with minimal water use and a low carbon footprint is required that provides full coverage and improves operational safety.</p>

 **Expected Results**

To improve operational safety in events caused by driving with low vision, reducing risks

 **Scope**

To change the strategy | Standarized work
